

## Thermostatic Concealed Shower Valve 6777-TW-80CP

### INTRODUCTION:

Thermostatic Concealed Shower Valve provides the most enjoyable showering experience for the customers.

JUSTIME's Lucky 7 Series Concealed Mixer Valve inherits the cylindrical design of this series, and is easier to maneuver. For safety aspect, the mixer valve is designed with protection mechanism. To prevent scald during shower, you can only rotate the handle to the demarcation point (40°C), and won't be able to continue without pressing the red button for hotter water.

Moreover, you are allowed to collocate the desired water outlets (handshowers / showerheads / faucets) with control valves, making shower more than just daily routine, but a source of enjoyment.

### DESCRIPTION:

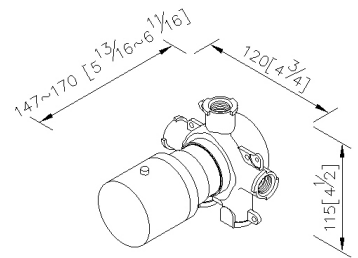

1. Thermostatic Control Valve is filled with special wax.
2. If the cold water inflow failed, the valve automatically switches off by means of the scald protection device.
3. Safety stop at 40°C .
4. Material of forging body meets JIS 3771 standard.
5. Material of inner valve: C84400 standard.
6. Meet the SC2 standards of ASTM.
7. Check valve prevent backflow of water, and is removable for maintenance.
8. G1/2 inlet.
9. The body of valve should be buried in the wall beforehand with 1"(2.5cm) adjusting tolerance in depth.
